

13/7/28

1- write a c++ which includes a class student.
Find out the size occupied by the object
of the class?

Ans: #include <iostream>

using namespace std;

class Student

{
int rollNo;

char name[20];

float marks;

};

int main()

{

Student s1;

cout << "Size of Student Object: " << sizeof(s1) << "bytes";

return 0;

}

Output:

Size of Student object: 28 bytes

Explanation:

- Student is a class containing:
 - int roll No $\rightarrow$ 4 bytes
 - char name[20] $\rightarrow$ 20 bytes
 - float marks $\rightarrow$ 4 bytes
- Total = 28 bytes (may vary depending on system/compiler due to memory alignment).
- sizeof(s1) gives the memory occupied by the object s1.
